

Your Expert Network Resource

ChannelServe is a company dedicated to providing professional network solutions to the Audio Visual industry. In an evolving environment, we enjoy being at the forefront of this developing market and offer a range of services to meet the changing landscape.

Network Audit

ChannelServe provides Cisco certified engineers to assess current infrastructure, identifying any issues in architecture or configuration that may be limiting performance and reliability of your audio visual network. We work with our clients to provide the best possible solution for your network requirements, focusing on optimisation and scalability, inline with industry best practice and use of targeted tools to locate issues and provide solutions.

Network Design

ChannelServe design network solutions with your individual requirements in mind. We realise that each site has its own particular elements that need to be catered for, therefore our design team discuss with you the type of end solution required in order to provide the most cost effective and appropriate design for each site and client. The use of the latest technologies and innovations ensures reliability and scalability for your audio visual network requirements.

Network Implementation

Whether for an existing or new network design, ChannelServe work with our clients in order to provide an implementation plan to ensure a successful network installation, helping to complete the network on time and on budget.

Managed Networking Services

ChannelServe leverage an extensive number of Telecom relationships to provide ADSL, SDSL, Leased Line and Ethernet services to Residential, Multi Dwelling Unit and Hotel developments.

Wireless Network Surveys and Design

Prior to Wireless network implementation an accurate site survey will provide details to ensure a successful network rollout tailored to the requirements of each individual site. A physical site visit allows ChannelServe engineers to specify correct coverage and bandwidth for optimum placement of wireless access points. Our engineers then produce a report outlining Wireless recommendations, with detailed images of the site and coverage in line with your audio visual requirements. A Wireless site survey can be also be used in order to help identify issues on an existing wireless network when data transfer is proving unreliable ChannelServe can advise on access point repositioning for optimisation of performance and coverage.

Voice Over IP

The deployment of VOIP systems is a specialist task. Experience of previous generation 'legacy technologies' as well as current industry practices are crucial to ensure efficient and effective transition. ChannelServe can ensure that the benefits of past systems are carried forward and blended with the increased flexibilities of newer technologies in an ever changing audio visual market.

Network Monitoring & Support

ChannelServe remote monitoring allows you to see what's occurring in 'real-time'. Therefore alerting of any issues in performance on your audio visual network, providing you the time to pro-actively implement control measures to ensure minimal downtime of service. Giving you peace of mind when site access is limited or restricted.

At ChannelServe we pride ourselves on having consistently met and exceeded our clients expectations in implementing network solutions.
